

# THE GENERIC RPG

*Mafia RPG Game*

## [GRPG Framework v.1.1]

This is the latest build of the GRPG framework. Please report any bugs to me at [bugs@thegrpg.com](mailto:bugs@thegrpg.com)  
Feel free to send any feature requests (no guarantee they will be added) or comments to [comments@thegrpg.com](mailto:comments@thegrpg.com)

## [Install Instructions]

1. Dump the `grpgtables.sql` dump file into the MySQL database.
2. Go into the `UPLOAD` folder and open `dbcon.php`, then replace the values inside that script with the correct username, password, and database, then save it.
3. Upload all the files in the `UPLOAD` folder onto your webserver.
4. Go to your site and create an account.
5. In the MySQL Database, go to the `grpgusers` table and edit the `admin` field on your account and change it to 1, now you are an admin and you can now access the control panel.
6. Set `rollover.php` to run at midnight every night via `crontab` on your server.
7. Enjoy! :)
